

# Swapping to a new VM

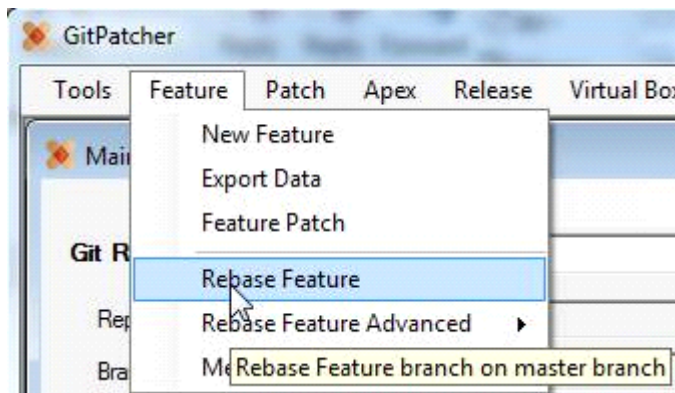

Tuesday, 14 May 2019 9:08 AM

## Swapping to a new VM

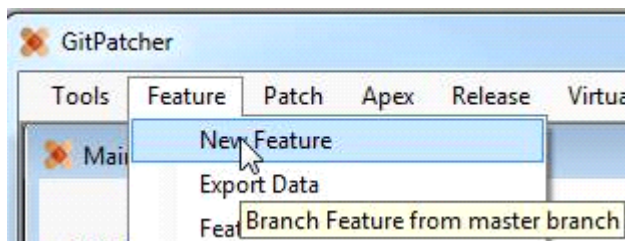

These instructions are designed to ensure your Git repo is in synch with your new VM.

If you are swapping to a new VM please do the following as initial steps before working with the VM.

1. Export and commit any work you are doing on your old VM to your feature branch.
2. Load the new VM.
3. Create an initial snapshot. 'Initial' or 'SDEPLOY.01-clean'
4. Rebase your feature (if you are working on one).

5. If not already working on a feature then if you start your feature with GitPatcher

The workflow now includes a step to bring your VM up-to-date again before you start.
