

Git Patcher: Release Notes GP-0.1.13

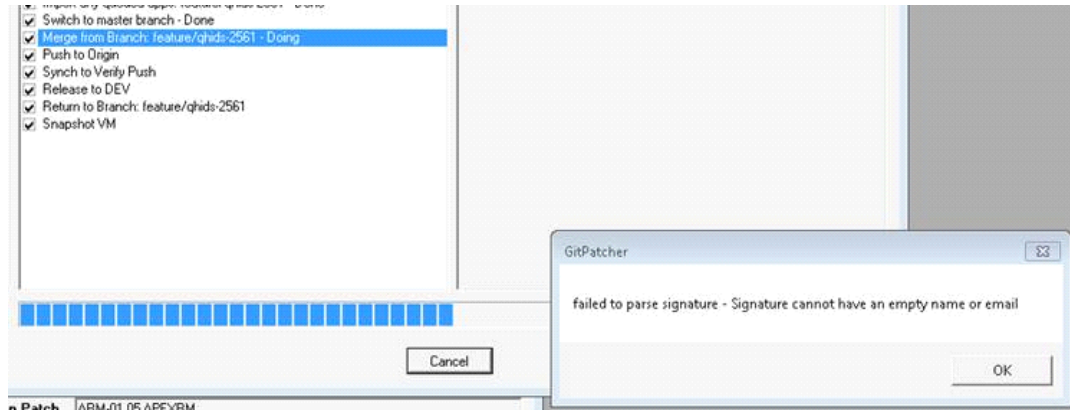

Tuesday, 2 April 2019 9:39 AM

GP-0.1.13

Minimum Patch: SDEPLOY-30.01.APEXRM

Fixes

Fixed credential reading from Repo

Will now correctly read user.name and user.email from repo config. This will allow the merge from feature to master to occur without a credential error.

Enhancements

Enforce standard uppercase feature names

Convert feature names to uppercase, when creating and comparing.

Create New Feature

qhids-1234 will be automatically converted to QHIDS-1234

Create Feature Patch

qhids-1234 - system will ask user to rename the feature first - Use SourceTree or TortoiseGit to rename. You cannot change from lower to uppercase in 1 rename - Must do in 2 renames Eg.

1. qhids-1234 to QHIDS-1234X
2. QHIDS-1234X to QHIDS-1234

Comparing patch_names

While comparing patch_names in filesystem to those in the database, GitPatcher will convert all patch_names to uppercase.
